Career Objective

Detail-oriented software engineer with two years of experience building scalable backend systems. Passionate about distributed systems and developer tooling, seeking to contribute to a fast-growing engineering team.

Education

B.Tech in Computer Science — Indian Institute of Information Technology, 2019 – 2023

Higher Secondary (Class XII) — Delhi Public School, 2018 – 2019

Skills

Programming: Python, Java, Go | Backend: Django, FastAPI, gRPC | Databases: PostgreSQL, Redis, MongoDB | DevOps: Docker, Kubernetes, AWS

Experience

Backend Engineer — Nimbus Systems (Jul 2023 – Present)

- Designed and shipped a rate-limiting service handling 10k requests/sec in production.
- Migrated a monolithic billing module into three independent microservices.
- Reduced average API latency by 32% through query optimization and caching.

Projects

Distributed Task Queue — Built a Redis-backed job queue supporting retries, priority scheduling, and dead-letter handling. 400+ GitHub stars.

Realtime Chat App — WebSocket-based chat application with end-to-end encryption using FastAPI and React.

Certifications

- AWS Certified Solutions Architect – Associate
- Google Cloud Professional Data Engineer

Achievements

- Winner, National Level Hackathon 2022 (Smart Mobility track).
- Published a paper on efficient graph traversal at a student research symposium.

Hobbies

Competitive programming, chess, and hiking.
